USB Express Service

Printed and shipped within

4 DAYS

Program Requirements

Available Personalization method:

Pad printing max 2 colours / Laser printing

Decoration Area: 10 mm W x 20 mm H

Minimum order quantity: 50 pcs

Maximum order quantity: 1.000 units

Shipping: 4 working days from artwork confirmation.

File requirement:

the artwork has to be sent in one of the following formats:

- Jpg 300 dpi not compressed (only for images, no text)
- PDF outlined
- Illustrator CS4 outlined
- Photoshop CS2 with layers

RENAMED UNIT

It renames the unit corresponding to the USB driver.

BACKGROUND

Personalizes the background of the unit

AUTO-RUN

Opens a file or image after USB Driver connection.

GO TO WEB

Autostart of a predefined web page after USB driver connection.

PASSWORD

When connecting the USB memory, a password will be required to prevent unwanted access.

Decoration techniques

Screen Printing

Printing technology that consists of transferring ink through a screen stretched on a frame. The ink cannot pass through the areas where there will not be an image because an emulsion or varnish will have been applied while the ink can freely pass through the areas that have not been blocked in this way.

The substrate to be printed is placed under the frame in which the ink is placed that will be extended over the fabric using a rubber roller. The ink passes through the mesh in the image part and is placed on the paper or fabric.

Pad Printing

Printing technology that consists of a metal or plastic plate covered with a photo-sensitive emulsion on which the image is offset printed through a chemical process forming a gravure. This plate is covered with ink and brushed with a blade. Next, a silicon pad presses down on the plate print collecting the ink of the gravure and taking it to the piece where it will be deposited through contact.

The different shapes and hardnesses of the silicon pads allow us to deposit the ink on a large variety of substrates (flat, cylindrical, spherical, concave convex) and materials (metal, plastic, etc.)

Laser Engraving

We can obtain a permanent, unchangeable and precise print with laser printing technology on different types of materials where the best results are obtained on metal products.

We influence the product substrate by using laser and this ensures we can eliminate the material's surface part.

Colours cannot be replicated by using this technology. The print colour is determined by the material and/or the coat that covers the product.

Doming

This technology consists of applying an epoxy resin to self-adhesive labels that have been previously printed to give them volume.

This ensures that a label is obtained with bright volume that is nice to touch. We obtain a 3D effect.
